Instructions

For use and maintaining your Portable Typewriter

Printed in Japan
THE SPACE BAR
This is used for spacing between words.

SHIFT LOCK KEY
When writing consecutive capital letters or uppercase characters, depress the shift lock key (3). To release the carriage into normal position, press the left-hand shift key (2).

LEFT-HAND SHIFT KEY
For writing a capital letter or an upper case character, hold down either the left-hand (3) or right hand shift key.

MARGIN RELEASE KEY
The type bars and the carriage lock 3 strokes after the bell rings. To write beyond this point, depress the margin release key, and typing can be carried on up to the extreme right of the platen. The key also enables one to type beyond the left hand margin without moving the margin stop (9). The same key is used to release keys which are jammed together, and is referred to as a “jam-release” key.

SPACE ADJUSTING LEVER
For single spacing, move this lever so that the red line on it is opposite the figure “1” on the carriage and for double spacing move it opposite the figure “2” on the same line. To write on determined lines such as orders, ruled paper etc. move the lever so that the red line is opposite the figure “0” on the lever; this releases the platen from its ratchet and it can be turned to the desired line.

LINE SPACING LEVER
To release this lever, simply push upwards. When replacing the machine into its carrying case just push this lever to right and down and it will lock automatically.

RAPID UNDERLINING AND DRAWING COLUMNS
Put the point of a pencil in hole in the line indicator and by moving the carriage to the right or left, you can underline complete lines rapidly and by turning the platen vertical lines can be drawn.

LINE INDICATOR
This indicates the height of the writing line when one makes corrections or when one is writing on determined lines. The engraved divisions correspond to the center of each.

TECHNICAL DATA
Number of keys...
Platen length...
Platen diameter...
Typewriter size (with case)... (240 mm x 22.5 mm x 100 mm)
(13.5/8” x 9/8” x 4”)
Letter types...
Pica
Shift...
6.5 mm.
Ribbon...
width 12 mm.
automatic rewinding
Typewriter weight (with case)...
about 4.5 kg.
9.9 lbs.

MARGIN STOPS
To set the left and right margins, these two margin stops which slide laterally are used. Move the stops until the red arrows correspond with the required positions of the left and right hand margins.

RIGHT HAND PAPER ADJUSTER AND CARRIAGE RELEASE LEVER
This is a dual purpose lever and when it is pressed towards the user until it is opposite the “R” the carriage can be moved freely to the left or to the right, when this lever is pushed back until it is opposite the “P”, the paper table will be released and the paper can be adjusted.

PAPER BAIL LEVER
Lift the paper bail by this lever when inserting paper or making corrections.

BACK SPACE KEY
If you wish to move the carriage backwards, press on this key as many times as necessary.

CARE OF THE MACHINE
Keep your machine as clean as possible and this will give it a longer life. Always cover it after use. When using a eraser, move the carriage completely to one side to avoid eraser dust falling into the machine.

CLEANING THE TYPES
Use a stiff brush. Do not use pins or other metallic instruments.

CLEANING THE PLATEN
The platen should only be cleaned with alcohol and never with gasoline or benzine which deteriorate the rubber.

OILING
This should not be done too frequently as dust is likely to collect in the oiling parts. Never put oil in the segment or typeliers.
