This Instruction Leaflet will enable you to obtain the best possible results from your new "Good Companion". We advise you to read it through carefully and carry out the instructions for the care and maintenance of the machine, thus ensuring many years of good service. We want you to consider the Imperial Typewriter Co., Ltd., and its specially appointed Agents, always at your service. Should you experience any difficulty in connection with the operation of your machine please contact your nearest Imperial agent who will give immediate attention to your requirements.

**REMOVING THE COVER**

Place the machine flat upon the table and unlock the case, lift catch and push knob to the right. Now lift top of case, slightly tilting it backwards. When replacing the cover, tilt lid slightly back, drop front, and the catch will snap fast. The typewriter is fitted with rubber feet and if desired may be removed from the baseboard by moving the baseboard securing levers outwards. If the machine is supplied with a zip fastening case it should be lifted clear of the case before being used.

**INSERTING THE PAPER**

Before feeding paper into machine lift bail bar to its full extent by means of the bail bar lever. Place the paper on paper shelf close up to paper locating guide on left of paper shelf. Rotate platen turning knob away from you and the paper will automatically be fed through the machine, passing under the platen roller, behind the bail bar rollers and over the auxiliary paper shelf. Now pull the bail bar forward and adjust the auxiliary feed rollers for correct position by sliding them along the bail bar.

**SETTING THE MARGINS**

Margins are set by means of the margin stops situated at the rear of the carriage. By pressing the top of the margin stops they will move freely along the margin scale to the desired position and will automatically lock when released.

**UNLOCKING THE CARRIAGE**

A locking latch engages on the left-hand side of the carriage. By pushing this away from you the carriage will be freed. Relock carriage before replacing case.

**ADJUSTING THE PAPER**

If the paper has not been fed through perfectly straight it can be adjusted by pushing back the paper release lever to its full extent. This frees the paper and also slightly raises the bail bar so that the edges of the paper can be adjusted until they are quite level, after which the paper release lever can be returned. The paper supporting arm will be found extremely helpful if paper of quarto or foolscap size is being used.

**PAGE END INDICATOR**

This useful device warns you when the bottom edge of the paper is being reached. After inserting the paper set the page end indicator at zero '0' (opposite the arrow) and by using the platen clutch release disc adjust the paper so that it is just held by the auxiliary feed rollers. Now type in the usual way until the end of the paper disappears behind the platen and when the figure '6' or '10' (for paper 6 or 10' deep) or '8' (for paper 8' deep) appears in line with the arrow, the bottom of the page has been reached.
HOW TO FIT A NEW RIBBON

Every machine is supplied complete with a ribbon and two spools. When it becomes necessary to fit a new ribbon, "Impertype" brand ribbons are recommended, and these are supplied ready wound on the spool, which fits on the right-hand spindle.

When fitting a new ribbon, it is necessary to rewind the old ribbon on to one spool, so that the other spool is left empty, and ready to accommodate the new ribbon.

To do this lock the carriage in the central position and raise the hinged cover from the front when the two ribbon spools will be seen. Move the ribbon reverse lever in the direction of the slot containing the lesser amount of ribbon; this will enable the ribbon to be wound on to the fuller spool. Now rotate the appropriate spool in the required direction until the ribbon is fully wound. The next operation is to remove the old ribbon and spools, which is quite simple. Depress the shift lock key, thereby locking the type unit in the "Capital" position. Take hold of the ribbon each side of the ribbon centre guide and move it downwards and inwards until the top edge becomes disengaged from the outside guides. Do not move the carriage while the hinged cover is in the raised position.

Remove each spool by swinging the ribbon tension levers out of the way, and lift the two spools clear of the machine. Now detach the end of the old ribbon from the empty spool, and attach the free end of the new ribbon to the metal prong. Take care to ensure that the black portion of the ribbon is uppermost, that the ribbon is attached in a clockwise direction, and that there are at least six turns of ribbon on the new spool, before replacing it on the machine.

The new ribbon on its two spools should now be placed on the respective spindles, the full spool on the right hand side. Again take care to push back the tension levers whilst doing so, and afterwards thread the ribbon through the right and left-hand ribbon guides.

Place the ribbon behind the inner prongs of the ribbon centre guide, the ribbon is now pressed downwards until the top edges are again engaged by the outside guides of the ribbon centre guides. To make the ribbon taut, the ribbon reverse lever should now be moved over to the right. The empty spool can now be lightly turned by hand to take up any slackness in the ribbon. Replace the hinged cover, release the shift lock, unlock the carriage and the machine is ready for use.

The Ribbon Reverse

Should it be necessary at any time to alter the direction of the ribbon's motion, this can be done by moving the ribbon reverse lever. When this is moved over to the right the ribbon winds on to the left-hand spool and vice-versa.

A few useful reminders for the care of your IMPERIAL 'GOOD COMPANION'

- Do not expose the typewriter to extremes of heat or cold, dryness or damp.
- Clean the machine at least once a week, using the cleaning outfit provided. Use a dusting brush for the moving parts and a soft cloth for the enamelling and plating.
- Clean the type each morning as a matter of routine, and ALWAYS before and after cutting a stencil. Lay a duster over the segment slots and brush the type from front to back — NOT sideways.
- Should you oil the machine yourself, be careful not to allow the oil to get on the ribbon or come into contact with any rubber parts.
- Never in any circumstances oil the type-bars.
- Diagrams and instructions in this leaflet should be followed carefully, particularly when changing ribbons.
- Never erase above the type-bar segment; move the carriage to the extreme right or left, and blow dust away from the machine as shown in photograph, above right.
- Do not attempt to make any mechanical adjustments, and always keep the machine covered when not in use.
- It is not advisable to oil the machine too frequently as this tends to collect dust and actually does more harm than good. We suggest that you take your machine at least once a year to an Imperial Service Depot for it to be thoroughly cleaned and oiled.

Imperial Service — within your reach

Imperial Agents and Branches are established in all the principal cities and towns throughout the world. They are equipped to give complete information in connection with Imperial products and to afford all facilities for demonstration. Remember always that there is an Imperial agent within easy reach who is able to give you expert advice on your typewriter. Every Imperial agent gives full Imperial Service and is backed by the most up-to-date typewriter factories in the world.
