How to Start Typing

NOTE—NUMBERS IN THIS MANUAL FOLLOWING A FEATURE NAME INDICATE REFERENCE TO THE DIAGRAM ON PAGE 4.

- Remove Snap-on Lid (21) from typewriter.
  To replace this cover, place it securely on the typewriter (back and front).
  Handle lifts out from underneath the typewriter.

- Unwrap stowaway electrical cord.
- Connect the typewriter to a proper electrical outlet.
- Turn power ON by pushing the Power Switch (20) upwards.
- Carrier moves to the left preset margin. This shows where the first character will type.
- Insert paper against the Paper Alignment Guide (1). (For best results a back-up sheet of paper should be used whenever typing on a single sheet of paper.)
- Lift Paper Bail (15) away from the Platen (3).
- Advance paper using the Platen Knob (16), Index Feature (See page 16), or Return/Relocate Key (19).
- Return the Paper Bail to its normal position.
- To center or straighten paper, pull the Paper Release Lever (2) forward.
- When typing is completed, move Power Switch down to turn OFF
  Unplug power cord if typewriter is to be left idle for an extended period of time.
NOTE: Because the transformer is located underneath the Power Switch on your typewriter, this area will feel slightly warm when the typewriter is ON. This is normal and is not hazardous.

When the Power Switch is OFF, but the typewriter is plugged into an electric outlet, a small amount of electricity continues to flow into the typewriter. Your typewriter, therefore, may feel slightly warm even when you have not used it for awhile. Again, this is normal and is not hazardous. However, it is suggested that you unplug the typewriter if it will not be used for an extended period of time.

**Flashing Light**

When the Shift Lock light (6) flashes, the typewriter has received an instruction it cannot obey. Touch SPACEBAR (11) to stop flashing light. Then review the appropriate section of instruction book and continue.

---

**Dual Pitch**

Your typewriter has been designed with the capability of typing in 2 pitches—Pica (10 characters per inch) and Elite (12 characters per inch). It is preset to 10 Pitch.

- To type in a particular pitch:
  1. Change printwheel if necessary to reflect typestyle and pitch desired. (To change the printwheel—read the following sections on "Ribbon Cassette: Removing and Inserting" and "Printwheel: Removing and Inserting").
  2. Depress and HOLD the CODE KEY while depressing the —“1” KEY to select 10 Pitch (Pica)
    —“2” KEY to select 12 Pitch (Elite)
    A beep confirms each setting.
  Changing Pitch in the middle of a line erases correction memory. The typewriter will begin to remember characters typed after an alternate pitch is selected—up to a full line.

**NOTE:** Depending upon the "look" you want, elite (12 pitch) printwheels can be used when the typewriter is set in 10 pitch (pica).

Each time the typewriter is turned ON, it is automatically set in 10 Pitch.

---

**Ribbon Cassette: Removing and Inserting**

**WARNING:** Use Smith Corona "H" Series supplies which have been specifically designed for this product. Use of non-Smith Corona supplies may render this unit inoperable.

You'll be able to tell when the cassette needs to be replaced when you see the different colored portion of ribbon exit the cassette.

- To remove Ribbon Cassette:
  1. Position Carrier to center of Platen by depressing the SPACE BAR (11) or BACK SPACE KEY (18).
  2. Lift cover.
  3. Grasp Cassette on both sides.
  4. Lift Cassette STRAIGHT up and out.

- To insert Ribbon Cassette:
  1. If ribbon is not tight, slightly turn gear wheel on bottom of Cassette in direction indicated.
  2. Hold Cassette with ribbon toward Print Hammer.
  4. Close cover securely. You will hear it snap into place.
Printwheel: Removing and Inserting

To remove Printwheel:
1. Position Carrier to center of Platen by depressing the SPACE BAR or BACK SPACE KEY.
2. Lift Cover.
3. Remove Ribbon Cassette.
4. Locate Print Hammer Release (to left of the Print Hammer).
5. Push the Print Hammer Release down.
6. Grasp Printwheel and pull up to remove.

To insert Printwheel:
1. Drop selected Printwheel between Print Hammer and plastic typing guide with typestyle name facing you.
2. Push the black plastic Printwheel guard, using thumb guide on left side of guard to return the Print Hammer to its original position.
3. Replace Ribbon Cassette.
4. Close cover securely. You will hear it snap into place.

Check Points

If your carrier does not advance or print properly, check the following points:
1. Does the ribbon cassette need replacing?
2. Does the correcting tape need replacing?
3. Is there a printwheel installed?
4. Is the printwheel installed properly?
5. Is the print hammer in the appropriate position?
6. Have the yellow shipping tubes been removed?
7. Has a foreign object fallen into the base of the typewriter?

Margins

Your typewriter is equipped with pre-set margins.
Pre-set margins can be used for general typing. These settings are in effect when the power is turned on (10 Pitch).
Left Margin—12
Right Margin—72

If you change the Pitch to 12 Pitch the pre-set margins are
Left Margin—14
Right Margin—86

When standard 8½" wide paper is aligned with the paper alignment guide (1), the above settings provide margin allowances that meet normal typing needs.

When typing tasks call for other than the above standard settings you can program different margins to fit your needs.

To program margins:
1. Position Print Hammer to desired margin location by depressing the SPACE BAR or BACK SPACE KEY. (To move the Print Hammer beyond the left margin simply backspace through the left margin. To move the Print Hammer to the right of the right margin, simply space or type through the right margin.)
2. To set Left margin: Depress the MARGIN KEY (10).
   To set Right margin: Depress and HOLD the CODE KEY (9) while depressng the MARGIN KEY.
   A beep confirms each new margin setting.

NOTE: To signal that you are nearing the right hand margin, the typewriter will beep once 5 spaces to the left of the right margin.

If programmed margins were set before turning the machine off, you will need to re-program your desired margins when the typewriter is turned on again.
How to Use the Tab Key

- To set tabs:
  1. Position Print Hammer to the desired tab location.
  2. Press TAB SET/CLEAR KEY (4).
     A beep sound confirms new tab setting.

  8 tabs may be set. Tabs may be set outside of margins.

Tab Clear

- To remove one tab setting:
  1. Position Print Hammer to that setting.
  2. Depress and HOLD the CODE KEY (9) while depressing the TAB SET/CLEAR KEY, release immediately. One beep is heard.

- To remove all tab settings:
  1. Depress and hold the CODE KEY while depressing the TAB SET/CLEAR KEY until 2 beeps are heard. If you are positioned at a tab stop, you hear 3 beeps.

Forward Tab

- To move to each tab setting:
  1. Depress the TAB KEY (5) Print Hammer moves to next tab setting.

NOTE: If tabs were set before turning the machine off, you will need to re-set your desired tabs when the typewriter is turned on again.

How to Correct

The Typewriter remembers one full line of characters and will automatically correct any or all of those characters. Characters beyond the full line of memory are easily corrected with an extra step.

- To remove any or all of the characters typed on the current line:
  1. Depress and HOLD the CORRECT KEY (13) to delete incorrect characters.
  2. Type the new characters in the spaces where the incorrect characters have been deleted.

- To remove and correct only one character on the current line:
  1. BACK SPACE until Print Hammer points to the incorrect character.
  2. Depress the CORRECT KEY until correction begins then release. DO NOT HOLD key down until total correction is made, otherwise more characters may be corrected.
  3. Type correct character.

Relocate

After correcting an error further back on the SAME line, this feature allows you to return quickly to the space after the last character on the line.

If the correction is on the SAME line, follow correction steps above. Then to reposition the Print Hammer to the space after the last character on the line.... Depress and HOLD the CODE KEY while depressing the RETURN/RELOCATE KEY (19).
Enhanced Typewriter Features

This Typewriter has several enhancements over a standard electric typewriter…features that allow you to type much faster with less bother. These features are activated by using the CODE KEY (9) in conjunction with other specified Keyboard Keys.

\[ \text{CODE} + \text{specified Keyboard Key} = \text{Enhanced Feature} \]

These features are deactivated in the same manner.

You will find on the following pages instructions on how to use these special features. Be sure to read each so that you can get full benefit from these enhancements.

Auto Return

This feature allows you to instruct the Carrier to Return automatically at the end of each typed line. The Typewriter actually begins to look for the end of a word as you near the right margin beginning with the 8 spaces before the right margin. When a space is typed in the "warning zone," the Carrier returns automatically. For lengthy words falling at the end of the line, simply type a hyphen where you normally would and the Carrier returns automatically.

- To Activate AUTO RETURN:
  1. Depress and HOLD the CODE KEY while depressing the HYPHEN KEY (-). A beep confirms the feature is activated.
  2. Type as you normally would but do not Carrier Return at the end of a line—this will be done automatically.
  3. To Deactivate Auto Return, depress and HOLD the CODE KEY while depressing the HYPHEN (-) KEY. No beep is heard.

Auto Center

Auto Center automatically centers text between the margins currently in use.

- To Activate AUTO CENTER:
  1. With the Carrier to the left of center, depress and HOLD the CODE KEY while depressing the NUMBER "0" KEY. This causes the Carrier to move to the center of the margins. A beep is heard.

2. Type the text to be centered. The carrier will backspace in half space increments for each character typed.

3. If a mistake is made, simply depress the CODE KEY and the NUMBER "0" KEY to restart the centering procedure.

4. After typing text, depress the RETURN/RELOCATE KEY. The text is centered automatically. (The Carrier Return automatically terminates the Auto Center feature.)

**NOTE:** You can cancel Auto Center before depressing the RETURN/RELOCATE KEY by depressing and HOLDING the CODE KEY while depressing the RETURN/RELOCATE KEY. The Carrier relocates to its original position before Auto Center was activated.
Other Code Key Functions

Line Space
There are three settings available: 1, 1½ or 2. The typewriter is preset to Single line spacing. To change the line spacing:
- Depress and HOLD the CODE KEY while depressing the "3" KEY for Single Line Spacing
- the "4" KEY for 1½ Line Spacing
- the "5" KEY for Double Line Spacing

Each time the typewriter is turned ON, Single Line Spacing is automatically set.

Index Up
To automatically move the typing position up the paper in increments equal to the current line space setting, depress and HOLD the CODE KEY while depressing the "6" KEY. If these keys are held down the typing position will move up the paper continuously until released.

Index Down
To automatically move the typing position down the paper in increments equal to the current line space setting, depress and HOLD the CODE KEY while depressing the "7" KEY. If these keys are held down the typing position will move down the paper continuously until released.

Super Script/Sub Script
Your typewriter will move up or down in ½ line increments to allow Super or Sub Scripts to be typed easily.

To Activate SUPER SCRIPT:
1. Depress and HOLD the CODE KEY while depressing the "9" KEY. Release immediately. The Carrier automatically moves up ½ line increment.
2. Type Super Script. The Carrier automatically returns to the original line.
If you decide you do not want to type a Super Script after activating the feature, depress the CORRECT KEY to return to your original line.

NOTE: Errors made while typing a Super or Sub Script must be corrected manually.
1. BACK SPACE one character.
2. Activate Super or Sub Script.
3. Depress and HOLD the CODE KEY while depressing the CORRECT KEY.
4. Type the incorrect character. It is erased.

Keyboard II Characters
This feature allows you to access the blue foreign characters and other symbols that appear on the bottom right of certain keys.

To access Keyboard II Characters:
1. Depress and HOLD the CODE KEY while depressing the Keyboard II Character Key. The Keyboard II character (appearing on the bottom right of the key) is typed.
Other Features

Platen Knob/Variable Line Spacer (16)
You can change the fixed typing line by simply rotating the Platen Knob in the appropriate direction.

Shift Lock Indicator Light (6)
The Shift Lock Light, located on the Shift Lock Key (7), will light when the Shift Lock Key is depressed. To deactivate Shift Lock, depress either of the Shift Keys (8 or 14) or the Shift Lock Key. The Shift Lock Light also flashes to indicate an error condition (see P 6).

Repeat Action
All keys will automatically repeat when held down except the following Keyboard II characters: ~ ~ ~

Impression Control
This feature varies the print impression level. If carbons are needed this feature will alternate hammer force to three levels: light, medium and heavy.

To Activate:
1. HOLD down the CODE KEY while depressing the
   "L" KEY for light hammer force
   "M" KEY for medium hammer force
   "H" KEY for heavy hammer force
It is recommended that if you are typing carbons, set the impression control to the "H" setting. If you are typing on very thin or light weight papers use the "L" setting. For regular typing use the "M" setting.
The Impression Control setting returns to the "M" (Medium) setting each time the unit is turned off.

Changing the Correcting Tape

You'll be able to tell when the correcting tape needs replacing when you see the different colored portion of the tape begin to unwind from the right spool.

To remove Correcting Tape:
1. Position Carrier to center of Platen by depressing the SPACE BAR or BACK SPACE KEY.
2. Open Top Cover.
3. Remove Ribbon Cassette.
4. Pull both spools off spindles.
5. Lift up and out.

To insert new Correcting Tape:
1. Hold spool with geared flange in left hand with flange at top.
2. Hold other spool in right hand.
3. Hold spools a few inches apart.
4. Slip tape between Printwheel and plastic typing guide. Use both thumbs to guide tape. Sticky side of tape must face toward rear of machine.
5. Channel tape around guides 1 and 2.
6. Turn spools inward and direct tape down to spindles without twisting. Tape at right must be directed over tension wire.
7. Snap spools into place securely. Tape feeds and winds at back of spools.
8. Advance left spool counterclockwise until colored section of tape disappears.
9. Replace Ribbon Cassette.
10. Close cover securely. You will hear it snap into place.
Supplies

Changeable Printwheels
A variety of printwheels with different typestyles are available from your Smith Corona product merchandiser. Use H Series printwheels only.

Printwheel numbers:
PICA TYPESTYLES
59527 Regency 10 modern version of standard
59536 Tempo 10 designed to give the best
59287 Orator 10 PROVIDES CAP HEADLINES
ELITE TYPESTYLES
59501 Regency 12 modern version of standard Pica
59519 Presidential 12 conserves space, yet retains
PICA OR ELITE TYPESTYLES
59543 Script 10/12 simulates handwriting

To protect printwheels not in use, store them in the original package.

Ribbon Cassettes
- Use Smith Corona Correctable Film Ribbon Cassettes (LIFT-RITE™) for unmatched sharpness and clarity providing for a superior correction system.
- Use Smith Corona Multi-Strike Film Ribbon Cassettes for higher character yield.

Film Ribbon is transferred to the paper when typing and can be used only once.

Correcting Tape
- When using Correctable Film Ribbon Cassettes, use Smith Corona Lift-Off Correcting Tape (LIFT-RITE) which "lifts" the typed character off the paper.
- When using Multi-Strike Film Ribbon Cassettes, use Smith Corona Cover-Up Correcting Tape (RE-RITE™) which "covers" up the error.

Start-Rite™
- A kit of "H" Series Supplies—3 Printwheels (Presidential 12, Tempo 10, Script), 4 Correctable Film Ribbon Cassettes, and 1 Lift-Off Correcting Tape.

Tri-Pack

WARNING: Use Smith Corona "H" Series supplies which have been designed specifically for this product. Use of non-Smith Corona supplies may render this unit inoperable.
Care and Maintenance

We recommend that your typewriter be adjusted, serviced, and lubricated by a Smith Corona trained typewriter technician at least once a year. If you do a great deal of typing, more frequent servicing may be necessary. Your Smith Corona dealer will be glad to discuss your needs with you.

NOTE: Always unplug the machine before using cleaning solutions on its surfaces.

Printwheel

To remove residue, dip the characters into a small container of ethyl or isopropyl alcohol (rubbing alcohol), and wipe with a clean dry cloth. Do not soak the printwheel.

Platen

Wipe surface with a clean cloth saturated with ethyl or isopropyl alcohol (rubbing alcohol).

Covers

To clean covers or keyboards, sponge with a mild ammonia or soap solution. Do not use household cleaners containing chlorinated compounds.

Precautions:

Keep all solvents and petroleum distillates (gasoline, kerosene, lighter fluid, etc.) away from plastic parts. Keep all cleaning solutions away from electrical components. Do not let cleaning solutions splash onto moving parts.

Safe Operating Recommendations

The typewriter is an electrical device with mechanical moving parts. To avoid unnecessary injury to the operator or damage to the machine, please review the following recommendations.

1. Be sure that the correct electrical current is used. (Standard United States and Canadian current is 110 to 120 volt, 60 Hz, alternating current.) Other countries may use different currents. If in doubt, check the electric rating label affixed to the typewriter. The wrong kind of current could cause an electrical short circuit and possible overheating or shocks.

2. Turn off the power switch when typing is completed. It is also recommended that you unplug the unit if it will be unused for an extended period.

3. Never insert metal objects such as screwdrivers, paper clips, nail files, etc. inside the typewriter when it is plugged in. An electrical shock may result.

4. If the typewriter is accidentally dropped, the jolt may disturb the insulation system. Disconnect the cord from the outlet before picking up the machine to avoid possible shock. Have the machine checked by a qualified service technician before using it again.

5. Do not remove the housing from the typewriter. This should be done only by qualified service technicians.

6. Always have the typewriter serviced by a qualified service technician.

7. Before attempting to clean your machine with any recommended solutions, make sure your machine is unplugged.

8. Never place any object inside the machine.

9. Never store your typewriter near excessive heat, cold, or dampness.
Service

If the typewriter needs service, call the dealer from whom it was purchased, or take it to the nearest Smith Corona Service Center. (To obtain the location of the nearest Service Center, call the appropriate toll free number. (1-800-448-1018 or 1-800-962-3000 for NY residents.)

**IMPORTANT:** When the machine is to be shipped, for any reason, the printwheel carrier inside the typewriter must be stabilized to prevent movement and the typewriter as a whole must be properly protected from shipping and handling hazards. Therefore, be sure to save all packing material in order to repack the typewriter exactly as it was received from the factory.

Packing Instructions

Lift typewriter cover.

Move carrier to right and place short plastic tube on the left side of the rear carrier rod.

Move carrier to left side of typewriter. Then place long plastic tube on the rear carrier rod with one end touching right side of frame.

If the original material is not available or if the printwheel carrier cannot be put into the correct position, the following packing method is recommended to help prevent damage during shipment. Smith Corona will not be responsible for damage during shipment.

**Step 1. Stabilizing the printwheel carrier.**

Lift the top cover.
Ball up single sheets of newspaper and insert them on each side of the printwheel carrier until all open spaces are filled to capacity.
Close top cover and tape.
Place the snap-on lid on typewriter.

**Step 2. Packing the typewriter.**

Acquire a box slightly larger than your typewriter. Put wadded newspapers in the bottom of the box for cushioning.
Place the typewriter inside the box and fill the sides and top with more wadded newspapers.
Close the carton flaps and tape them shut. It is recommended that you use either filament tape or 2" wide plastic tape.
In large letters, address the package for shipment to the nearest service location. Remember to include your return address.

**NOTE:** To qualify for Smith Corona Warranty (see page 26) proof of purchase must accompany typewriter.
Product Consumer Warranty
Limited Warranty

90 Day Warranty
Smith Corona warrants this typewriter against defects in material or workmanship for a period of 90 days from the date of original purchase for use, and agrees to repair or, at our option, replace any defective unit without charge for either parts or labor. Proof of Purchase will be required.

1 Year Parts Warranty
Following the first 90 days from the date of purchase and thereafter until 1 year from the date of purchase Smith Corona will replace any defective part at no charge. There will be a standard charge for labor and the cost of transportation.

IMPORTANT: This warranty does not cover damage resulting from accident, misuse or abuse, any modification or alteration including attaching the unit to other than the recommended receptacle or voltage, nor does it cover ribbon replacement or cleaning of the unit.

NOTE: No other warranty, written or verbal, is authorized by Smith Corona. This warranty applies to units sold in the United States and Puerto Rico only.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above exclusion and limitations may not apply to you.
